2

Web Application

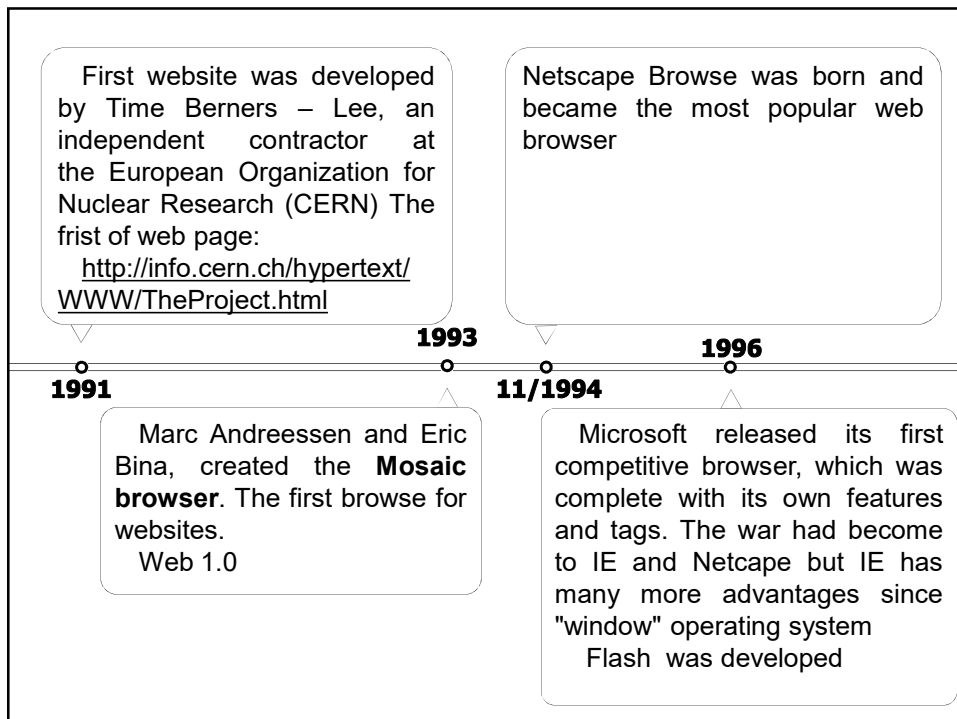

- A web application or "web app" is a software program that runs on a web server.
- Unlike traditional desktop applications, which are launched by your operating system, web apps must be accessed through a web browser.
- Make web app, run in web server and you can open everywhere with internet.

5

 <h1>HTTP Protocol</h1> 		
<ul style="list-style-type: none"> - Web browsers and servers communicate via TCP/IP. - Hypertext Transfer Protocol (HTTP) is the standard application protocol on top of TCP/IP supporting web browser requests and server responses. - Web browsers also rely on DNS to work with URLs. These protocol standards enable different brands of web browsers to communicate with different brands of web servers without requiring special logic for each combination.

6

 <h1>HTTP Protocol</h1> 			
<p>- HTTP feature:</p> <ul style="list-style-type: none"> ▪ HTTP is connectionless, stateless: The HTTP client (web browser) initiates an HTTP request and after a request is made, the client waits for the response. The server processes the request and sends a response back after which client disconnect the connection. Due to this nature of the protocol, neither the client nor the browser can retain information between different requests across the web pages ▪ HTTP is media independent: data can be sent by HTTP as long as both the client and the server know how to handle the data content 			
 7

HTTP Protocol

9

08/2019	KHOA CNTT - NLU	LẬP TRÌNH WEB	PHAN ĐÌNH LONG	28
---------	-----------------	---------------	----------------	----

9

URL

- HTTP resources are identified and located on the network by Uniform Resource Locators (URLs), using the Uniform Resource Identifiers (URI's) schemes http and https.

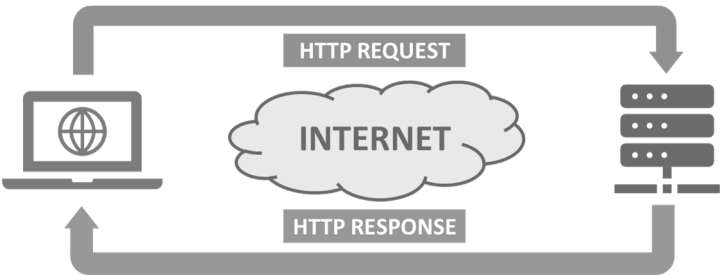

10

08/2019	KHOA CNTT - NLU	LẬP TRÌNH WEB	PHAN ĐÌNH LONG	28
---------	-----------------	---------------	----------------	----

10

 <h2>Internet Addresses</h2> 				
<ul style="list-style-type: none"> - The host is named using DNS (domain name system), which translates IP addresses into a string of names. - EX: hcmuaf.edu.vn - Top level domains include: <ul style="list-style-type: none"> – .edu - educational sites – .com - commercial sites – .gov - government sites – .mil - military sites – .net - network administration sites – .org - nonprofit organizations 				
				 11
08/2019	KHOA CNTT - NLU	LẬP TRÌNH WEB	PHAN ĐÌNH LONG	28

11

 <h2>HTTP Request - Response</h2> 				
<ul style="list-style-type: none"> - HTTP is based on the client-server architecture model and a stateless request/response protocol that operates by exchanging messages across a reliable TCP/IP connection. 				
				
				 12
08/2019	KHOA CNTT - NLU	LẬP TRÌNH WEB	PHAN ĐÌNH LONG	28

12

 <h2>HTTP Request - Response</h2> 			
<ul style="list-style-type: none"> - Browser sends a request sent to the web server that hosts the website. - The web server then returns a response as a HTML page or any other document format to the browser. - Browser displays the response from the server to the user. 			
 13

15

Static and Dynamic Web

- Static Web pages

- A static Web document resides in a file that is associated with a Web server.
- Clients can read data.
- The content is only changed when someone publishes and updates the file (sends it to the web server).
- Web pages are coded in HTML.
- Server sends exactly the same response for every request.

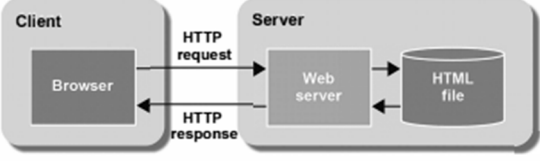

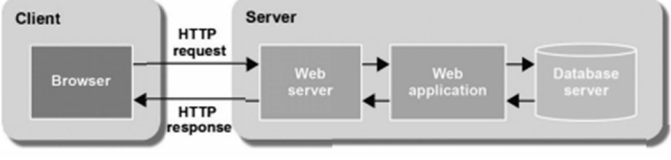

16

---------	-----------------	---------------	----------------	----

16

 <h2>Static and Dynamic Web</h2> 			
<p>- Dynamic Web pages</p> <ul style="list-style-type: none"> ▪ Web pages is created by a Web server whenever a browser requests the document. When a request arrives, the Web server runs an application program that creates the dynamic document. ▪ Because a fresh document is created for each request, the contents of a dynamic document can vary from one request to another. ▪ Dynamic web uses the server side languages such as JSP - SERVLET, PHP, and ASP.NET etc. for developing a website. ▪ Content is generated quickly and changes regularly.
